Lecturer,

Dept of CSE, IIUC.

Project Title :

Teaching Agent

For manage student it is important to know which students have taken the course. So we have to search the id of the student using prolog program. Again when we have to make student result, we have to search student id then we get student marks.

Therefor our project input , output and user facility are :

Input , Output and User facility :

Input	Output	Description
result.	Create result	When the teacher does the marking, grading, publish result then create result will be created.
inputresult.	Total marks	When the teacher gives the student's name, matric id, marks input of the subjects then total marks will be created.
Se.	Software Engineering grade	When the teacher gives input se., then software will show the grade of the Software engineering subject
dc.	Data Communication grade	When the teacher gives input dc., the software will show the grade of the Data communication subject
eco.	Economics grade	When the teacher gives input eco., the software will show the grade of the Economics subject

ai.	Artificial Intelligence grade	When the teacher gives input ai., the software will show the grade of the Artificial Intelligence subject
os.	Operating Systems grade	When the teacher gives input, the software will show the grade of the Operating System subject
gpa.	Student's gpa will show	Student's GPA will be created when the teacher inputs the results of all the subjects.
cgpa.	Student's final grade will show	Student's final grade will be created when the teacher inputs the results of all the subjects.
get_result.	Students will get their semester results.	When the student searches with his id, his grade will show.
